

Tumor Growth InVivo 1

Luís Romera

In this document, I'm going to analyse the tumor progression of the *In vivo* 1 of my master's dissertation.

Let's plot the data

```
getwd()
```

```
[1] "C:/Users/luisr/Documentos/Documents/Documentos - Copia/Mestrado/in vivo 1/Imunoterapia/"
```

```
library(tidyverse)
library(magick)
library(ggsci)

tumorData <- read.csv("TumorGrowth1.csv")

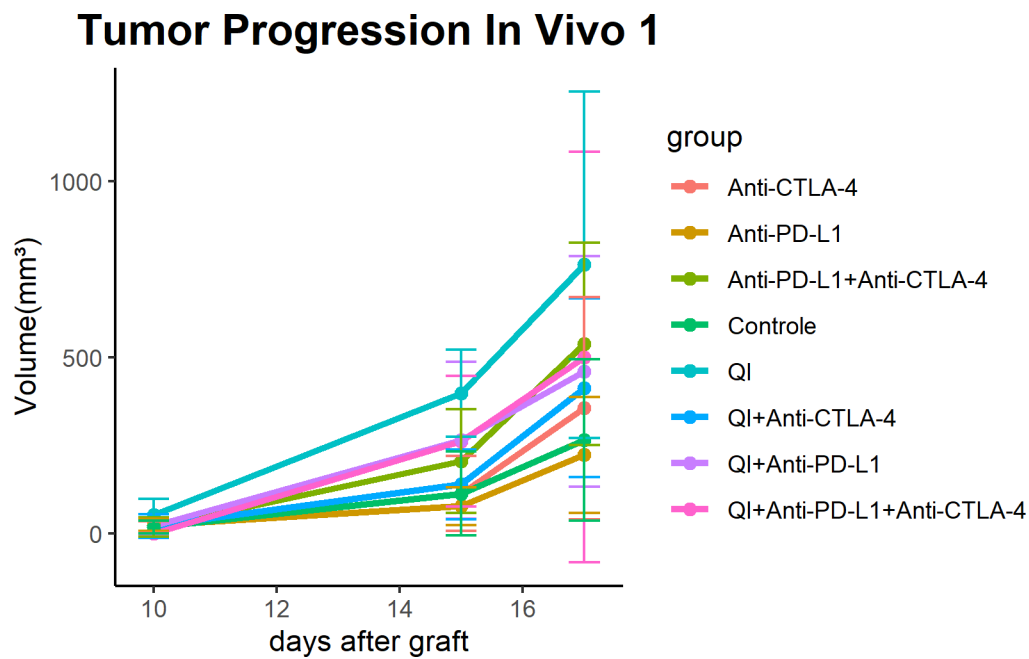

tumorPlot <- ggplot(
  tumorData,
  aes(day, volume, color = group)
) + geom_line(linewidth = 1.2) +
  geom_point(size = 2) +
  geom_errorbar(
    aes(
      ymin = volume-std,
      ymax = volume+std
    ),
    width = 0.5
  ) +
```

```

labs(
  title = "Tumor Progression In Vivo 1",
  y = "Volume(mm³)",
  x = "days after graft"
) +
theme_classic() +
theme(
  plot.title = element_text(
    hjust = 0.5,
    face = "bold",
    size = 16
  )
)
)

tumorPlot

```

```

ggsave(
  filename = "TumorPlot_invivo1.pdf",
  plot = tumorPlot,
  width = 8,
  height = 6
)

```
